

LUCAS BAZAN

Fullstack Engineer | Next.js • TypeScript • APIs • PostgreSQL • AI-First Development

[LinkedIn](#) | [GitHub](#) | [Portfolio](#) | [Email](#) | Argentina

PROFESSIONAL SUMMARY

Information Systems Engineer with experience building full stack applications using Next.js, TypeScript, Node.js, and PostgreSQL. Focused on designing scalable APIs, reliable business workflows, and production-ready systems with strong attention to testing, CI/CD, and software quality. Experienced using AI tools such as Claude and Cursor as part of a daily engineering workflow for architecture, implementation, debugging, and documentation.

SKILLS

- **Programming Languages:** JavaScript, TypeScript, SQL, Java, C++, C#.
- **Frontend:** Next.js, React, TypeScript, Tailwind CSS, React Server Components, Responsive Design.
- **Backend & APIs:** Node.js, REST APIs, Authentication, Integrations, SQL, PostgreSQL, MySQL, .NET.
- **Testing & Quality:** Cypress, Cucumber, End-to-End Testing, CI/CD, GitHub Actions.
- **Infrastructure & Tools:** Git & Github, Postman, Vercel, CI/CD.
- **Practices & Concepts:** Data Structures, Design Patterns, Object-Oriented Programming, Agile Methodologies, Testing, SOLID Principles, UML, Responsive Design, SEO, Edge Computing, Functional Analysis, Microservices.
- **AI Development Workflow:** Claude, Cursor, AI-assisted development, prompt engineering, architecture exploration.
- **Languages:** English (B2 - Advanced), Spanish (Native).

EXPERIENCE

Full Stack & AI Engineer

August 2026 – Present

Self-employed

- Building software products and AI-powered solutions for businesses in collaboration with a technical partner. Responsible for the full development lifecycle, from gathering requirements and designing solutions to architecture, full-stack development, API integrations, AI workflows, deployment, and ongoing iteration. Currently developing multiple AI-powered products, including systems for automated video and podcast generation, as well as a short-form video platform.

Full Stack Developer (Freelance)

March 2026 – May 2026

Centro Distribuciones

- Designed and developed a fullstack ERP system for inventory, sales, and administrative operations using TypeScript, Next.js, and PostgreSQL.
- Built REST API integrations, business workflows, and data models to improve operational traceability and real-time visibility.
- Implemented scalable frontend and backend architecture with a focus on maintainability and future growth.
- Developed a high-performance e-commerce platform, achieving a 107% increase in organic traffic through data-driven optimization.

Software Intern

November 2025 – March 2026

Argentine Navy

- Designed and implemented ASTERIX (EUROCONTROL) protocol decoders using C++ and the Qt framework, integrating them into mission-critical radar console systems for real-time data processing within the Operational Analysis, Weapons, and Electronic Warfare Service area.
- Developed and maintained software tools for information management and operational support.
- Collaborated in structured environments requiring reliability, organization, and process adherence.
- Contributed to the digitalization and efficient handling of operational information.

Full Stack Developer (Freelance)

January 2025 – May 2025

Foton. | ICAT

- Developed an AI-powered web application for automated film script analysis using Next.js, TypeScript, and Supabase.
- Managed deployment and infrastructure configuration on Vercel, ensuring continuous integration and high service availability.

Summer Trainee - Training Internship

January 2022 – March 2022

Telefónica | Movistar

- Participated in an intensive technical and business training program, applying Agile methodologies (Scrum) to solve strategic challenges in the telecommunications sector.

AREAS OF INTEREST

- Artificial Intelligence
- Data Analysis
- Process Optimization
- Operational Efficiency
- Decision Support Systems
- Digital Transformation

PROJECTS

Proyecto Agro - AI-Powered Livestock Monitoring Platform | <https://proyecto-agro-web.vercel.app>

- Developed an AI-powered decision support platform for livestock management in collaboration with INTA, combining computer vision, data processing, and mobile technologies.
- Trained and optimized a computer vision model capable of performing offline cattle condition assessment directly on mobile devices used in the field.
- Designed data collection, synchronization, and reporting workflows to support operational monitoring and analytics.
- Participated in the end-to-end design and implementation of the solution, integrating software engineering, data management, and artificial intelligence.
- Collaborated with researchers and agricultural experts to solve real-world operational problems through innovative technology solutions.

EDUCATION

- Information Systems Engineering, Engineering, Universidad Nacional del Sur - **Graduated March 2026**
- High School Bachelor in Economics and Administration, Economics and Administration - **Graduated 2020**
